

## MPI3508 3.5" HDMI LCD 快速入门

### 用于树莓派

1. MPI3508 用于树莓派时先按照图片连接硬件

- 2. 烧录资料中带的树莓派镜像到 SD 卡中
- 3. 接上树莓派电源即可正常工作

### 用于 HDMI 通用显示器

MPI3508 用于其他场景 HDMI 显示时，只需要连接 HDMI 接口，并对模块供电即可。

支持 480\*320~1920\*1080 之间任意分辨率输入，自适应调整。

注：MPI3508 自带按键可以控制背光，功能如下：

| 动作     | 效果         | 说明                  |
|--------|------------|---------------------|
| 短按一下   | 背光亮度增加 10% | 到达 100%后再按一下会从 1%开始 |
| 长按 3 秒 | 背光关闭       | 长按超过 3 秒并松开背光关闭     |

**注意事项：** 鉴于屏幕尺寸较小，建议模块工作在 480\*320、800\*480、800\*600 等较低分辨率，高分辨率显示效果不佳。

同时屏幕发热量随着分辨率增加而上升。

## MPI3508 3.5" HDMI LCD quick start

### Working with Raspberry Pi

1. Connect the hardware as the following picture showed:

*Connect and align right the connector*

*Connect the HDMI by using HDMI connector*

*HDMI connector*

2. Download the .img file that in DVD into TF card
3. Connect the power supply, and then LCD module is working

### Work as HDMI displayer

When MPI3508 work as HDMI displayer, only HDMI signal and power supply is required. And resolution of HDMI source can be from 480\*320 to 1920\*1080.

**NOTE:** The key on MPI3508 can be used as backlight adjust, and function description as follow:

| Press | Action                             | Note  |
|-------|------------------------------------|---|
| short | Increase the backlight by 10% step | Backlight should be begin from 1%             |
| Long  | Backlight close                    | Backlight closed when key is pressed up to 3s |

**NOTE:** We highly recommend you let MPI3508 working in a low resolution such as 480\*320, 800\*480, 800\*600 because of the small LCD size. And high resolution should not get a good looking in 3.5" LCD module

By the way, MPI3508 should be heated if it works in high resolution.
